Luminous Virtual Windows™

Sky Factory Luminous Virtual Windows transform enclosed interiors into more spacious feeling and memorable environments. They present photographic illusions of wild natural vistas in a window-like frame. Their slim profile (1 3/16"/46mm) allows for surface mounting or recessed flush installation. They come in several standard sizes, from approximately 22"x 40" to 34"x 64", and can be ordered to custom dimensions. Several trim styles in various woods and brushed aluminum elegantly finish each unit.

To enhance the illusion of depth, we recommend installing Luminous Virtual Windows as pairs or triples. By creating spaces in the continuous photographic scene, the installation allows viewers' imaginations to fill in the gaps, heightening the illusion of space beyond the window.
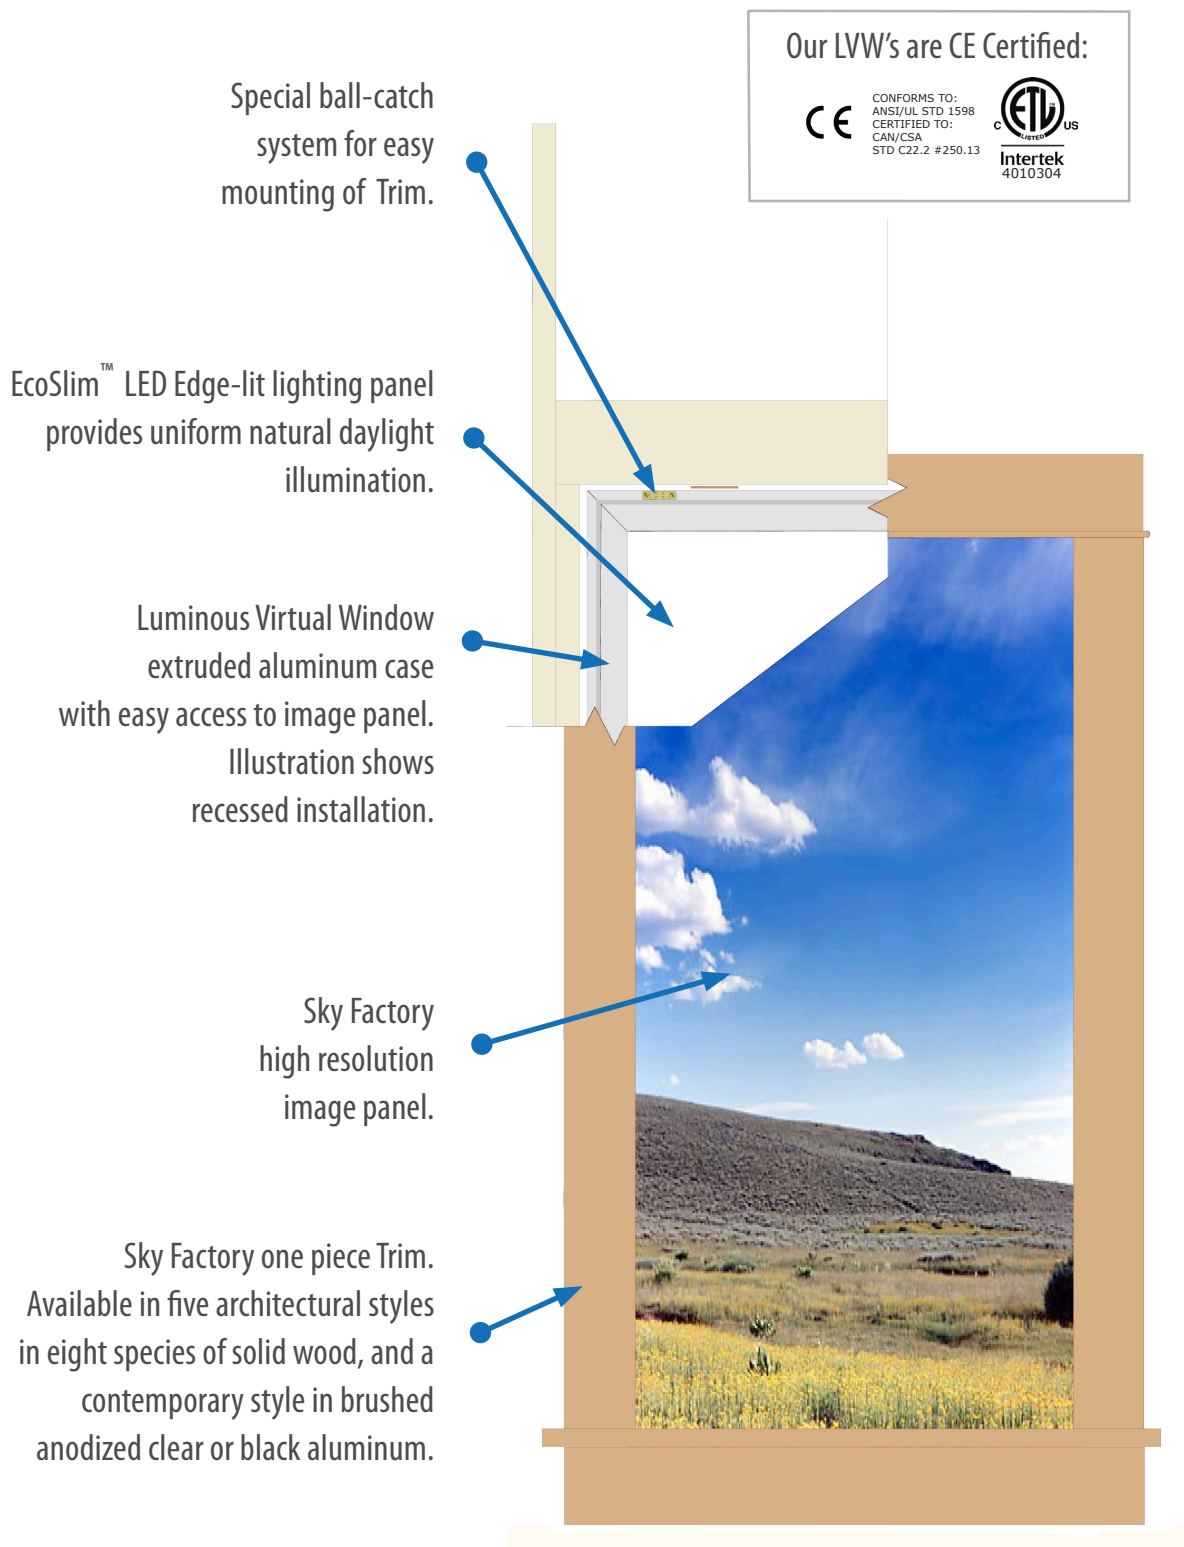

8 Step Selection System

Step 1 Choose Mounting Type

Step 2 Choose Power

Step 3 Choose Trim Style

Step 4 Choose Trim Material

Step 5 Choose Configuration and Size

Step 6 Choose Image

Available in five architectural styles
in eight species of solid wood, and a
contemporary style in brushed
anodized clear or black aluminum.

* See LVW Recessed and Surface Mount cross-sections on page 4.

Step 1 Choose your mounting type

Luminous Virtual Windows come in two mounting styles: Recessed and Surface Mount. Recessed mounting requires 3" of depth from the outside face of the wall covering. Surface mounting comes with side panels which mount to the LVW case.

Step 2 Choose your power

The EcoSlim™ LED system operates on 24 V DC, appropriate where radio frequency interference (RFI) is not acceptable, such as MRI and other RF-free environments or where lamp replacement is problematic. For RF-free environments, the DC model comes with a Listed power supply that can be mounted remotely. For all other environments, the AC model has internal power supplies and therefore can be wired directly to an AC circuit.

Step 3 Choose your trim style

LVW trim is available in a variety of wood species, as well as aluminum.
See Step 4 for trim material choices.

Step 4 Choose your Trim Material

Wood trim is finished with a clear, hard, satin lacquer.
Soft maple is uncoated for those who would like to apply their own stain.
Poplar is primed for those who would like to paint it.
Aluminum is provided with an anodized finish.
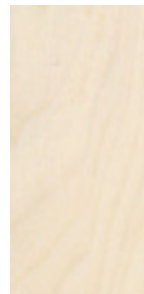

Wood

Cherry	Hard Maple	Pine	Walnut	Red Oak

| White Oak	Unfinished Stain Grade Soft Maple*	White Primed Poplar	White Painted Poplar

Aluminum

Brushed Anodized Clear Finish	Brushed Anodized Black Finish

IMPORTANT: *Wood colors may be different from the samples pictured.*
*Do not use samples to match other elements in a building (contact one of our designers).*

* Or alternate wood if soft maple is not available. For more staining detail, see Appendix B on page 13.

Step 5 Choose your Configuration and Sizes

Select from our standard sizes in single, clerestory, twin, or triple configurations

AC2_CH_CSTY_6478_6ld_2-28x52md02

Image Selection

We recommend that you look at the images in our Luminous Virtual Window and Signature Edition catalog. The Signature Edition represents the work of nationally renowned artists.

Luminous Virtual Windows are perfect for displaying landscape images. They provide openings into vistas of intimate or expansive beauty.

Multiple window configurations enhance the illusion of actually looking out through a window as they trigger binocular vision and are configured in a format that the mind readily accepts as a "window".

When you find a suitable image, note the image ID number, and proceed to Step 7 . In Step 8 we ask you to call us to review your selections. We will compare your image choice with your Luminous Virtual Window configuration and size choices to insure there will be no compromise in quality or resolution.

Custom design image services

We are also happy to custom design or locate images for your specific needs and tastes, or design custom sizes. In this matter, you will correspond with one of our Sky Designers. (contact information on page 11).

Appendix B:
Staining

Unfinished Stain
Grade Soft Maple

Staining

Staining wood is most effectively done on-site by a professional woodworker. A professional is familiar with a variety of woods and stains and can provide a range of samples to best match the client's expectations and/or the local decor. Because we cannot effectively do this, we offer a stain grade option: soft maple*, which receives stain well and is more universal in appearance. The client then has the trim stained on-site to give the desired effect.

If soft maple* does not meet your needs, contact a Sky Designer to discuss other options.

We always guarantee excellent workmanship and high quality wood in all our options. However, because the variables in staining are so great, we cannot guarantee the final look when choosing the stain option.

* Or alternate wood if soft maple is not available.
